

Manual Test Plan

Yoo

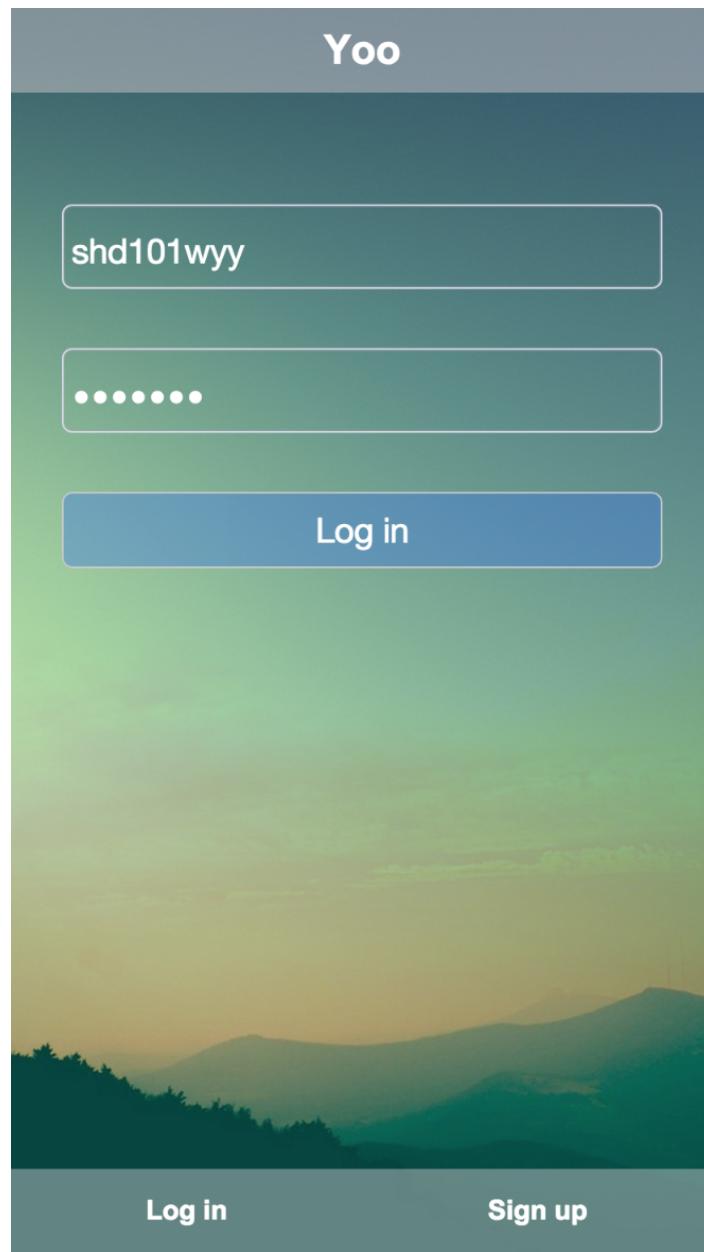

By Yiyi Wang - ywang189

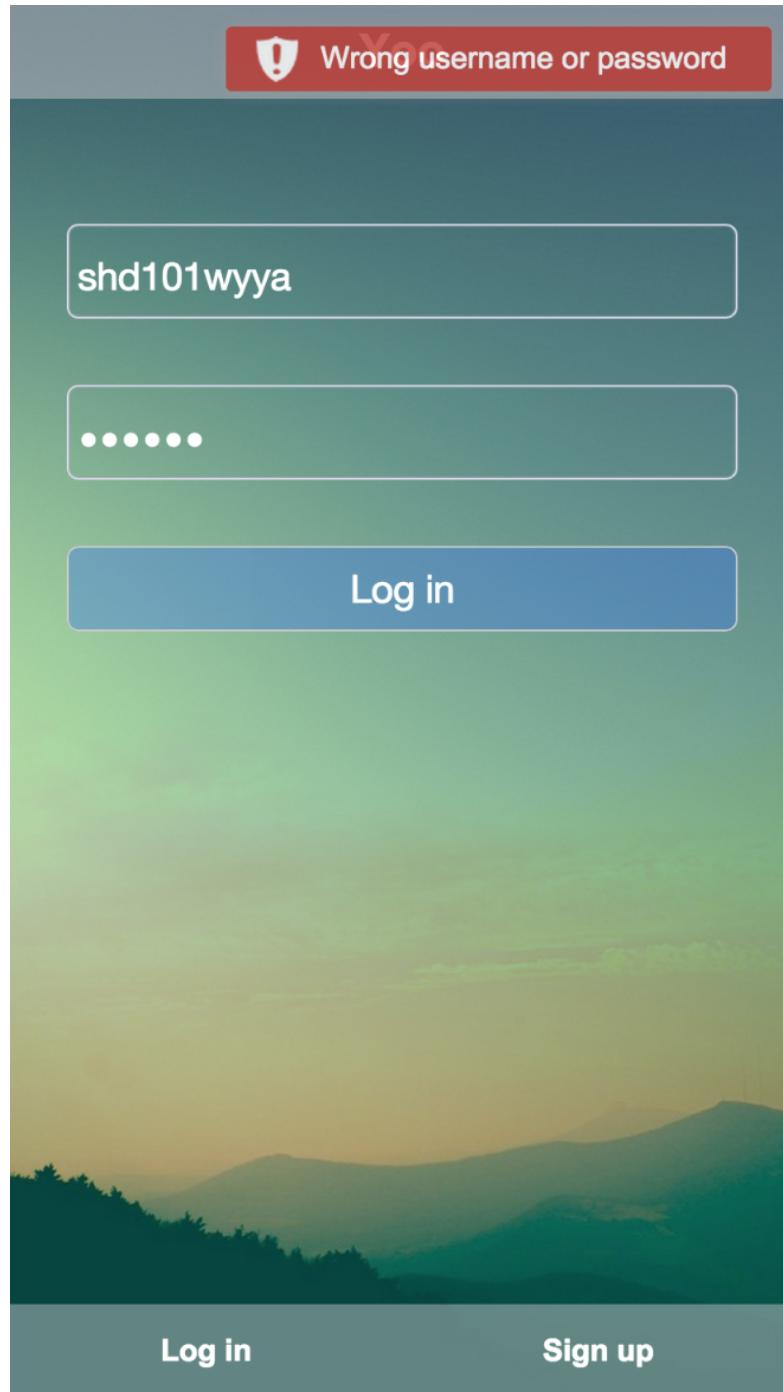

This is the login/signup page

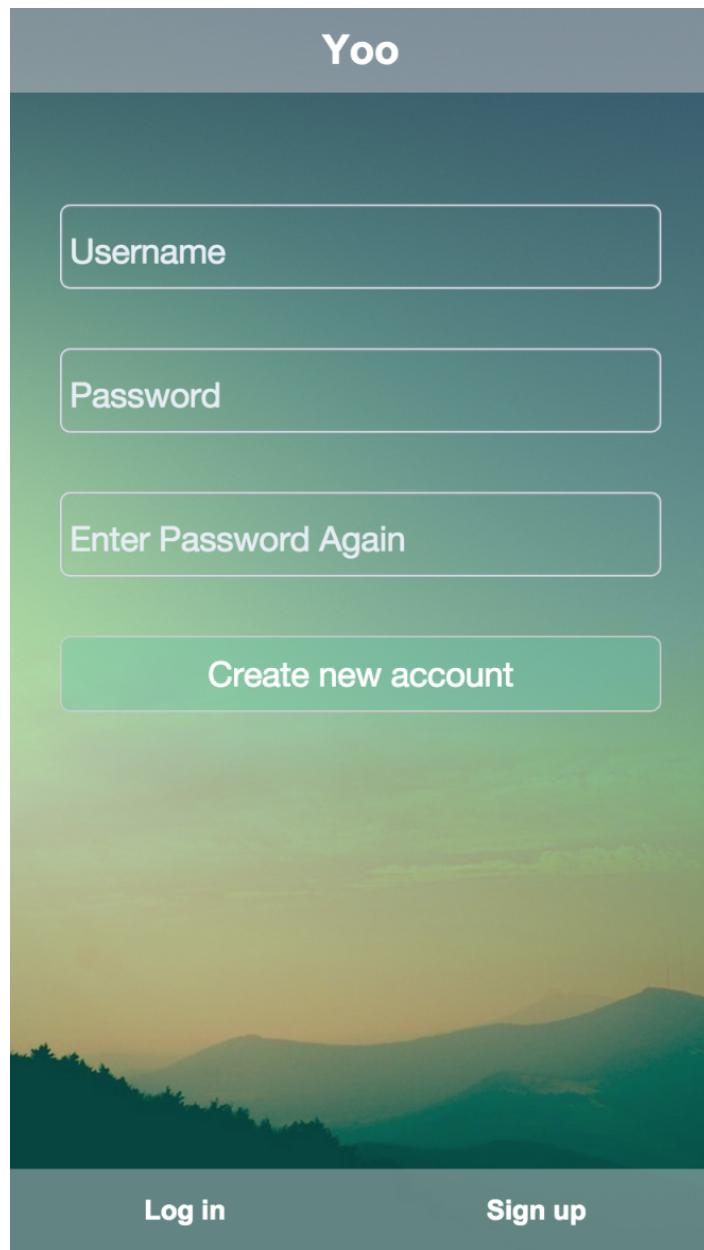

User can enter username and password to log in.

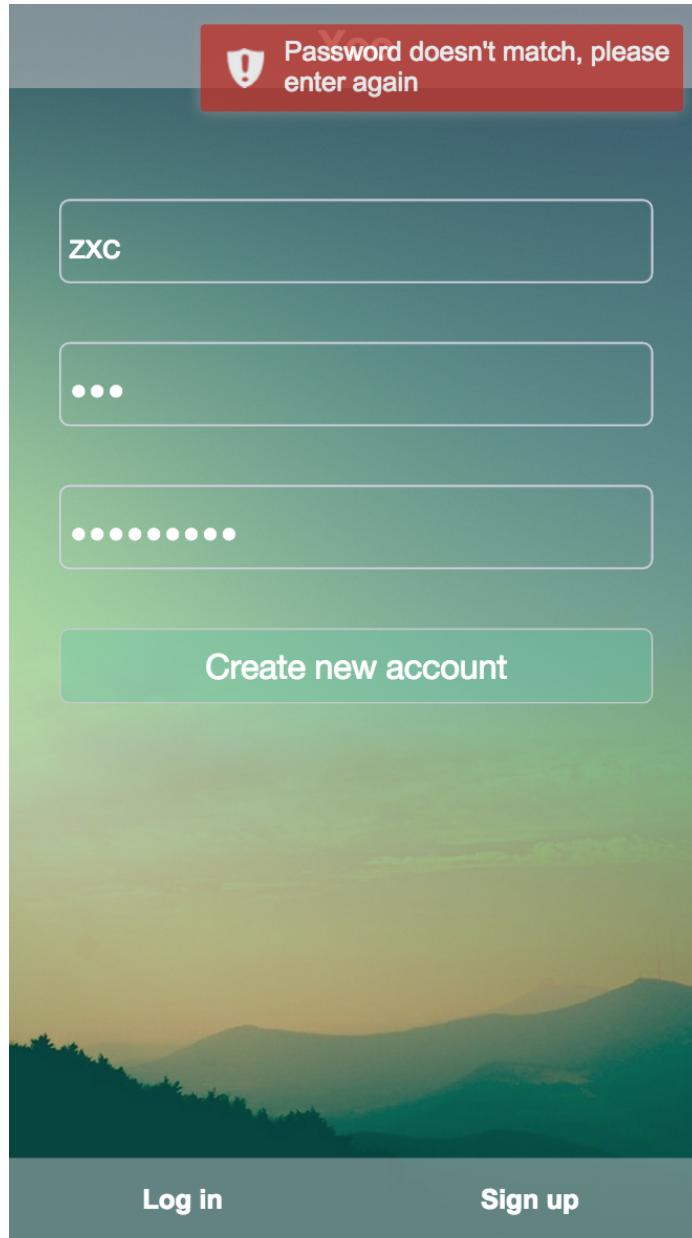

If user enters wrong username or password, the error message should pop up.

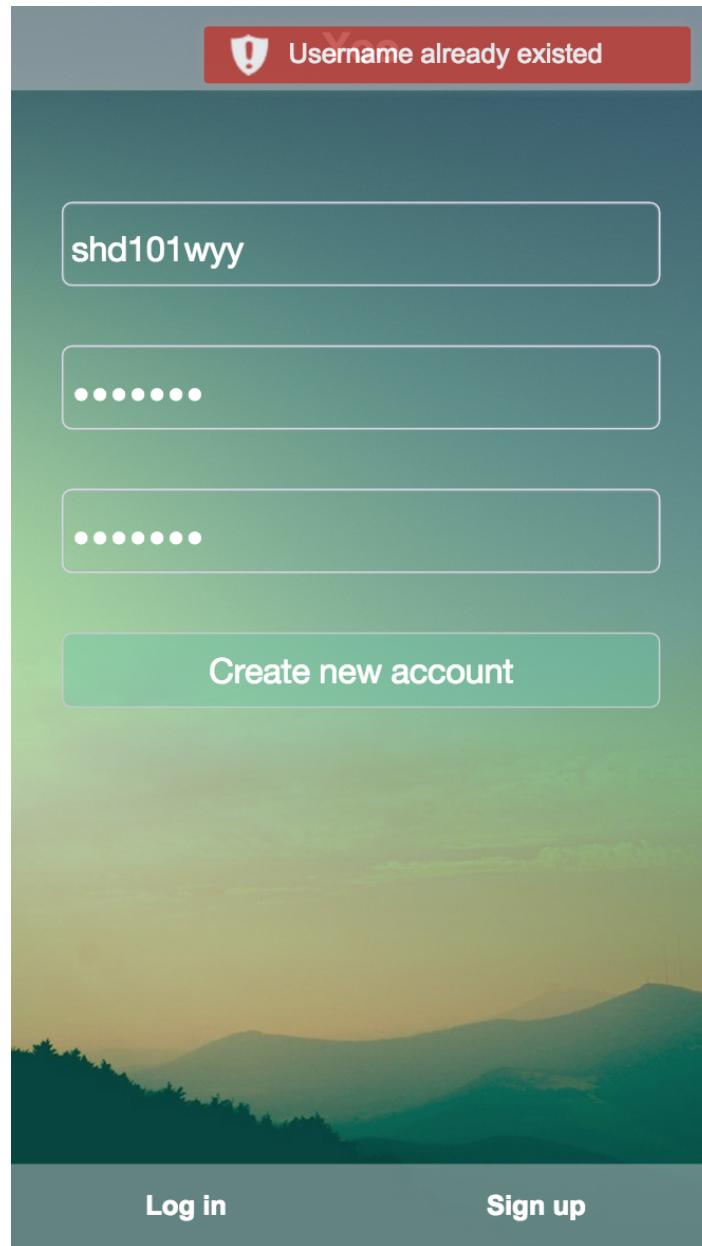

User can sign up new account by clicking "Sign up" button at footer.

When signup, if two passwords that user entered don't match, an error message should appear.

If the username that the user wants to use is already being used by another user, an error message should appear.

After login, the home page should show up. The weather information at user's current location should be displayed.

The footer has 5 buttons:

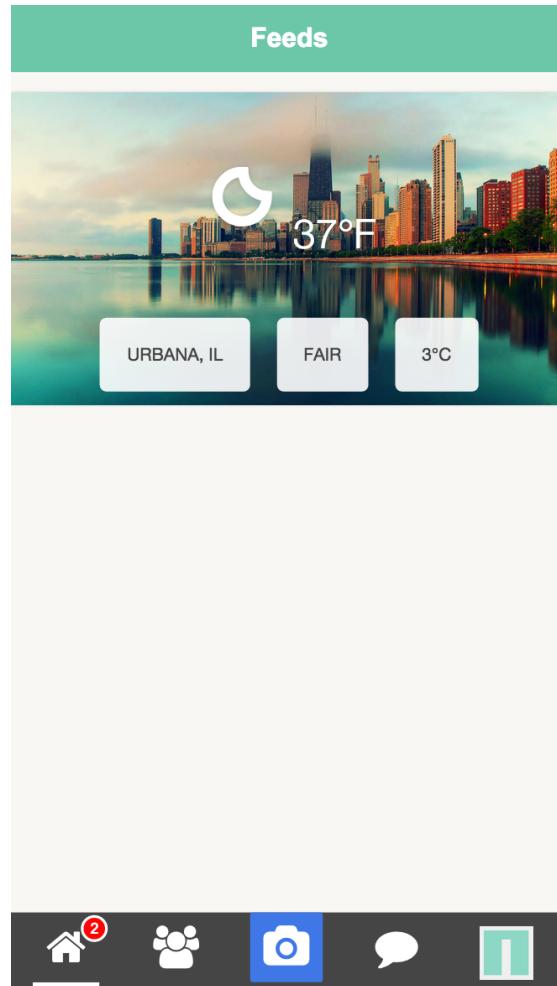

The leftmost is the "home" button. If user clicks it, it will display all nearby posts.

The second button is "passby" button. If user clicks it, information about all nearby users will be listed.

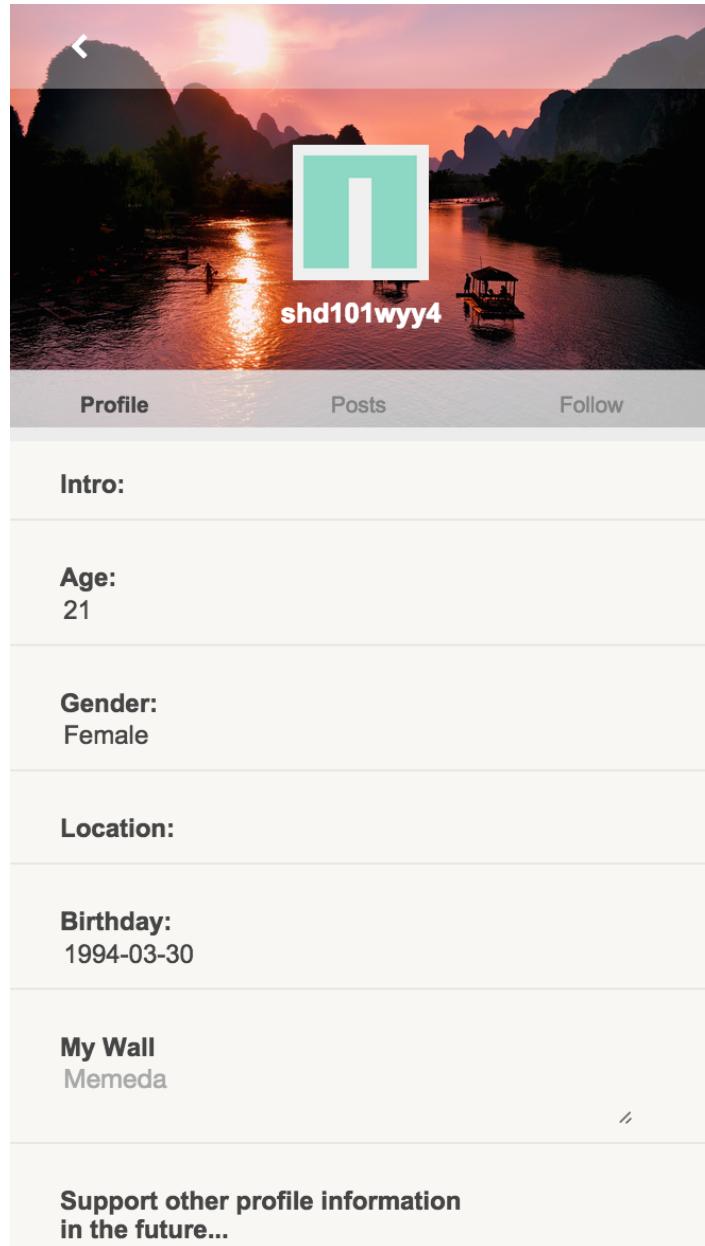

The camera button is "**Yoo**" button, which allows user to post text, photo, or audio.

The fourth button is "notification" button, which will show chat or comment for post notifications.

The rightmost button is the "profile" button. A user can check profile page by clicking this button.

After a user clicks "profile" button, the profile page will show up.
User can change wallpaper by clicking the wallpaper.
User can change profile image by clicking the profile image.

User can change his profile introduction by clicking "Intro" field.

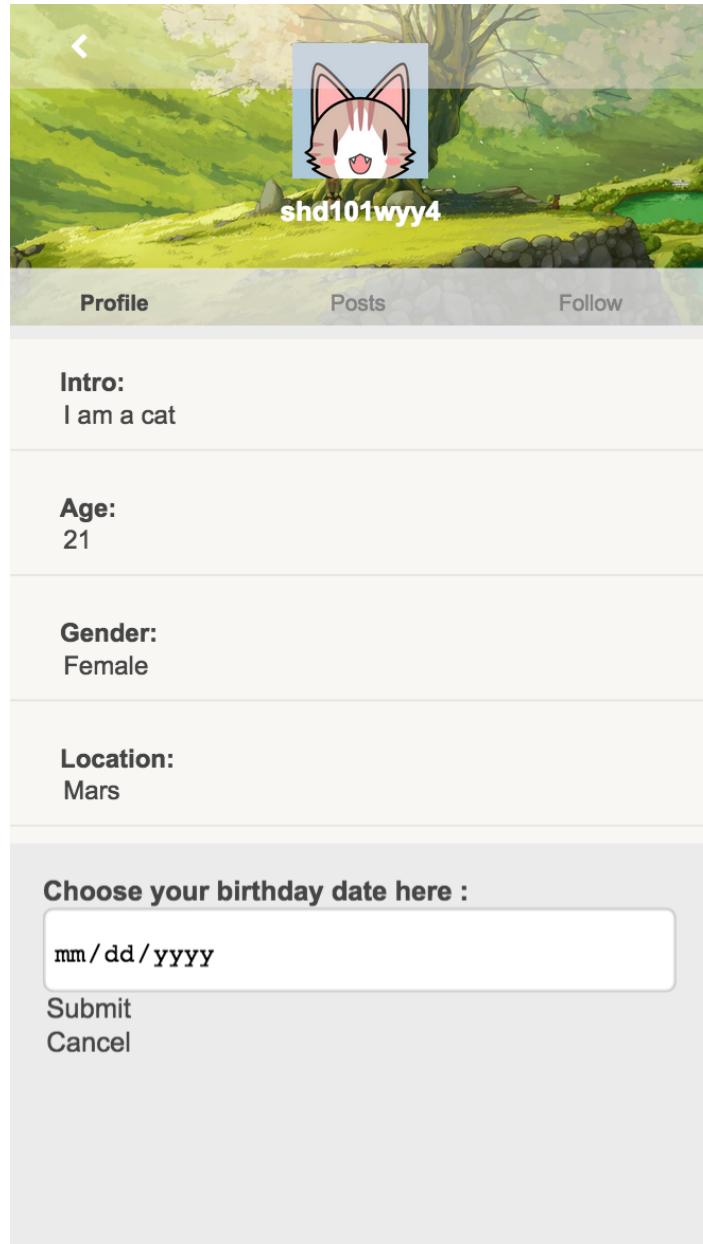

User can change his gender by clicking "Gender" field.

User can change the "Location" information by clicking "Location" field.

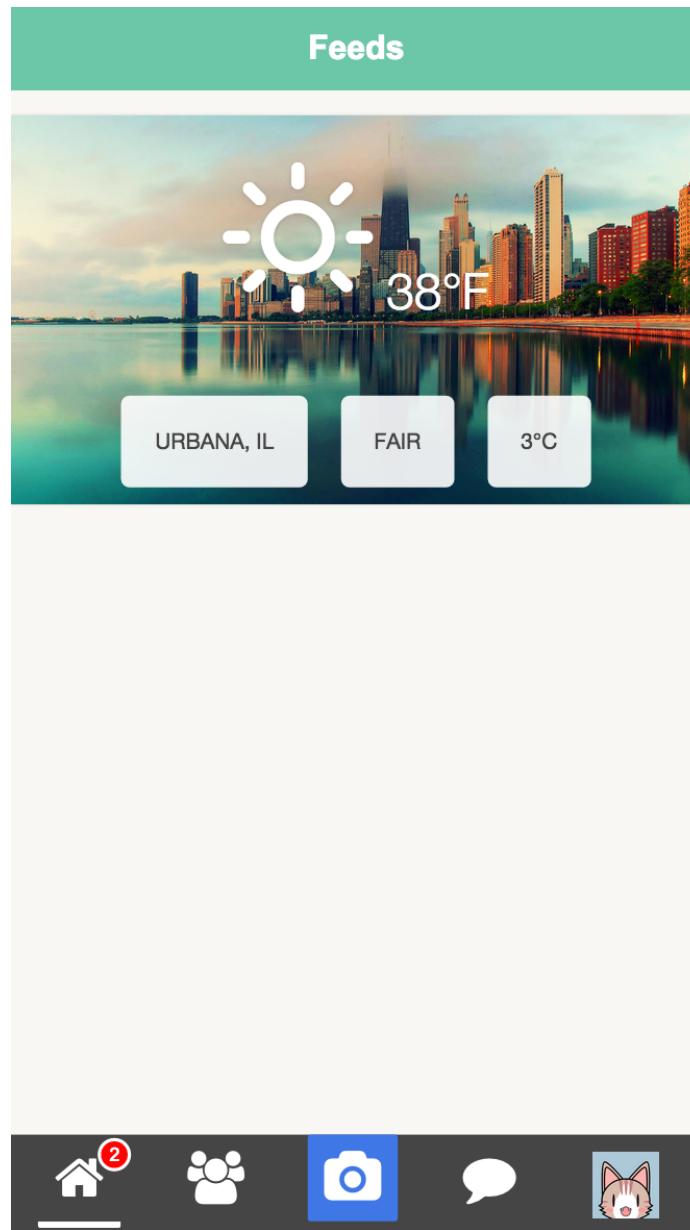

User can change birthday by clicking "Birthday" field:
After user changed birthday date, the "Age" field should be recalculated.

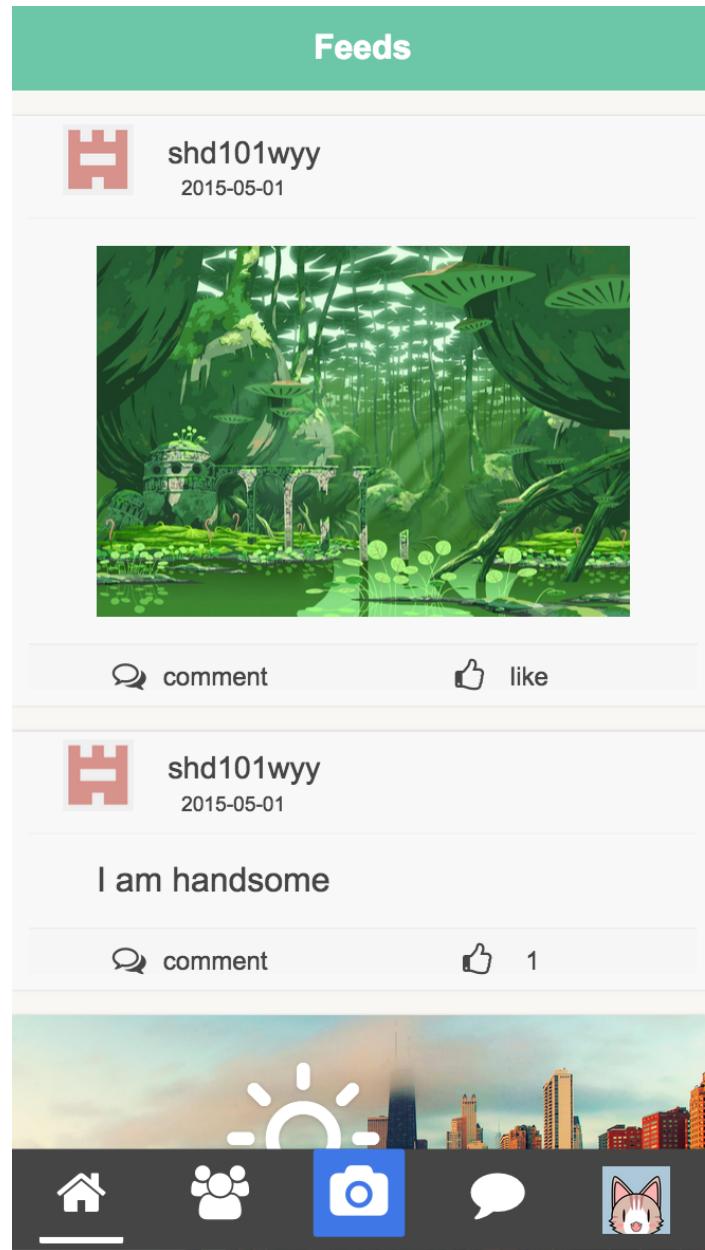

Let's go back to the home page.

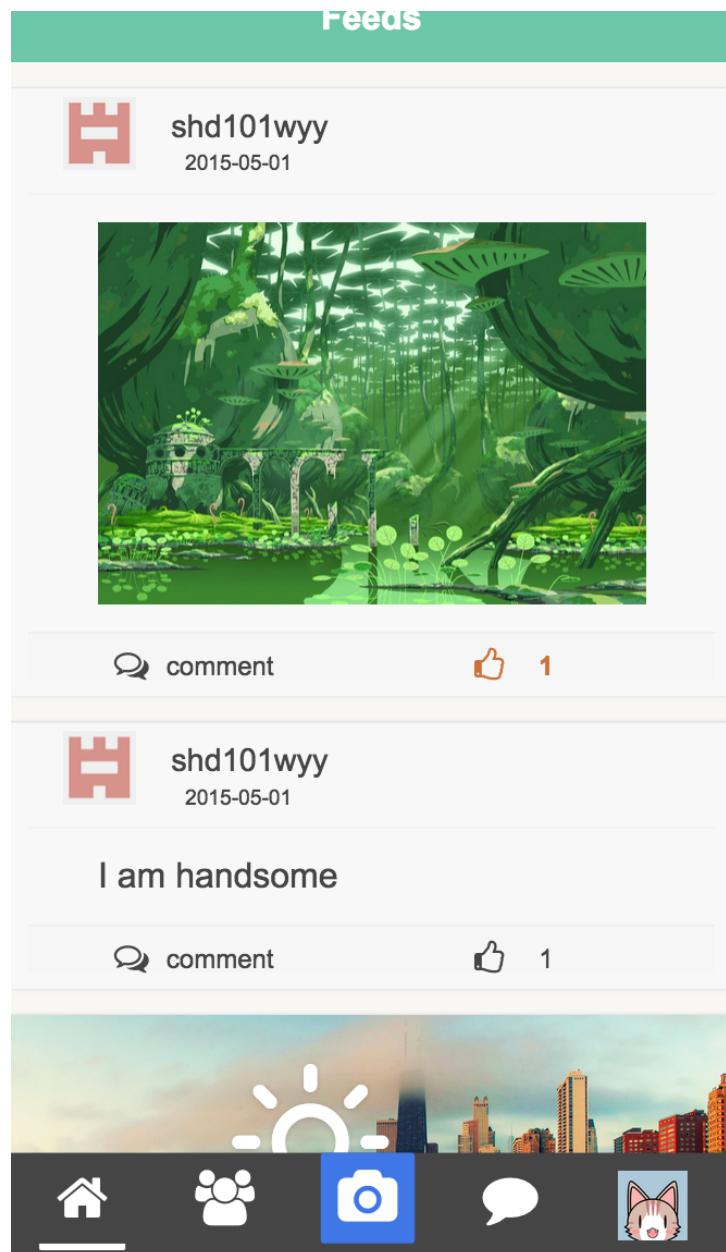

If there are posts nearby, the small notification should show up.
See the small red circle. "2" indicates that there are 2 nearby
posts.

If there are notifications of nearby posts and the user clicks the "home" button, the nearby posts should be added to posts list on home page.

A user can like/unlike a post by clicking "like" button on the post card.
The "like" button should display how many people liked this post.
Also, if a user clicks the "like" button, the color of the "like" button should become orange, which means that the user likes the post.

User can make comments to the post by clicking "comment" button on the post card. Then the user will enter the comment page. The comment is real time.

The font color will be purple if that comment is made by the user.

The font color will be black if that comment is made by other users.

huhh

Send

When user is not in comment page and receives post comments from other users, there will be a notification in the notification page.

Eg: the notification below shows that the user received a comment from "ywang189".

If the user clicks the notification card, the comment page will show up.

If there are other **Yoo** users nearby, the notification should show up on right top of the "passby" button, by clicking which the user can check nearby users' information.

"2" inside the red circle means there are 2 users nearby.

After clicking the "passby" button, user will enter the "passby" page. All users that have passed us will be displayed as a list.

The "passby" card should display the username and profile introduction of the "passby" user.

User can follow or unfollow another user by clicking the "follow" button.
After follow, the color of the button should become orange.

User should be able to check other "passby" users profile by clicking their name card.

User can make a private chat with the "passby" users by clicking the "chat" button.

chat

So right now we are chatting with "shd101wyy3"

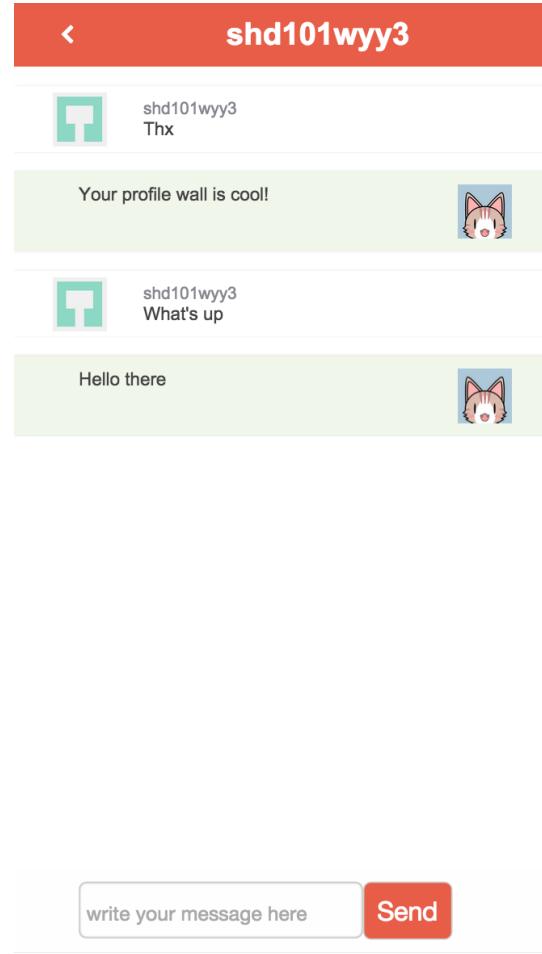

shd101wyy3

Hello there 

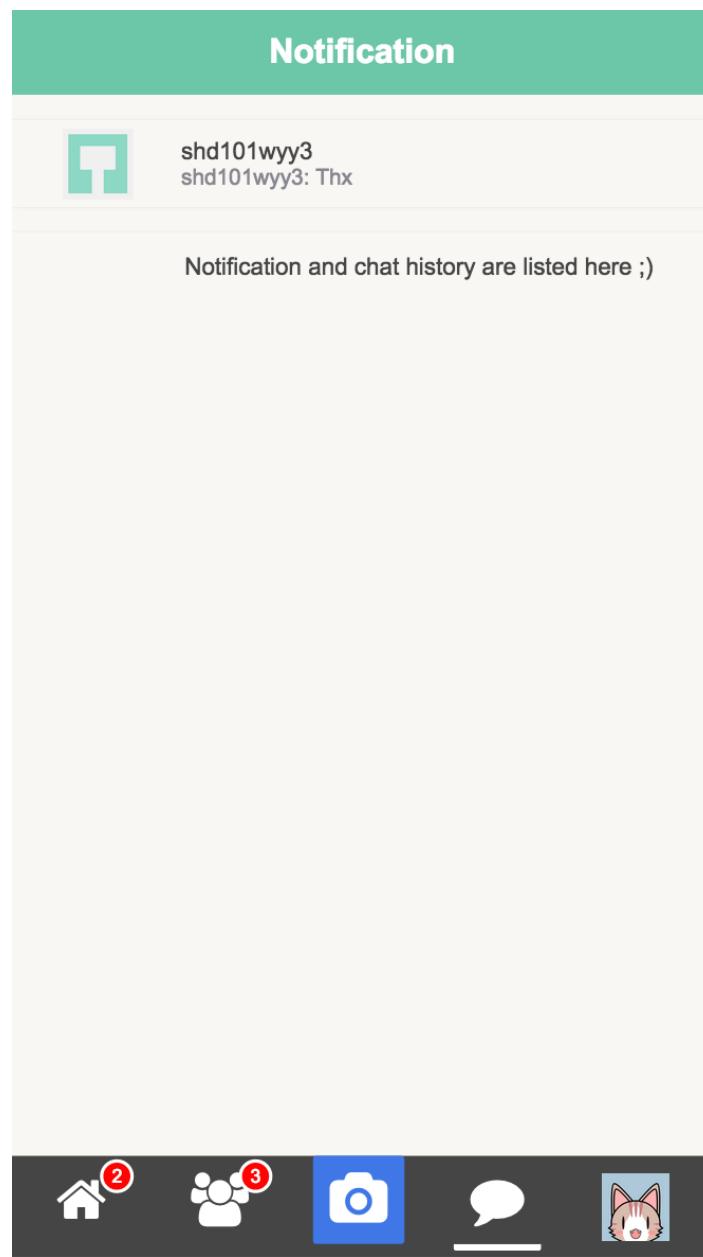

write your message here **Send**

The chat is real time.

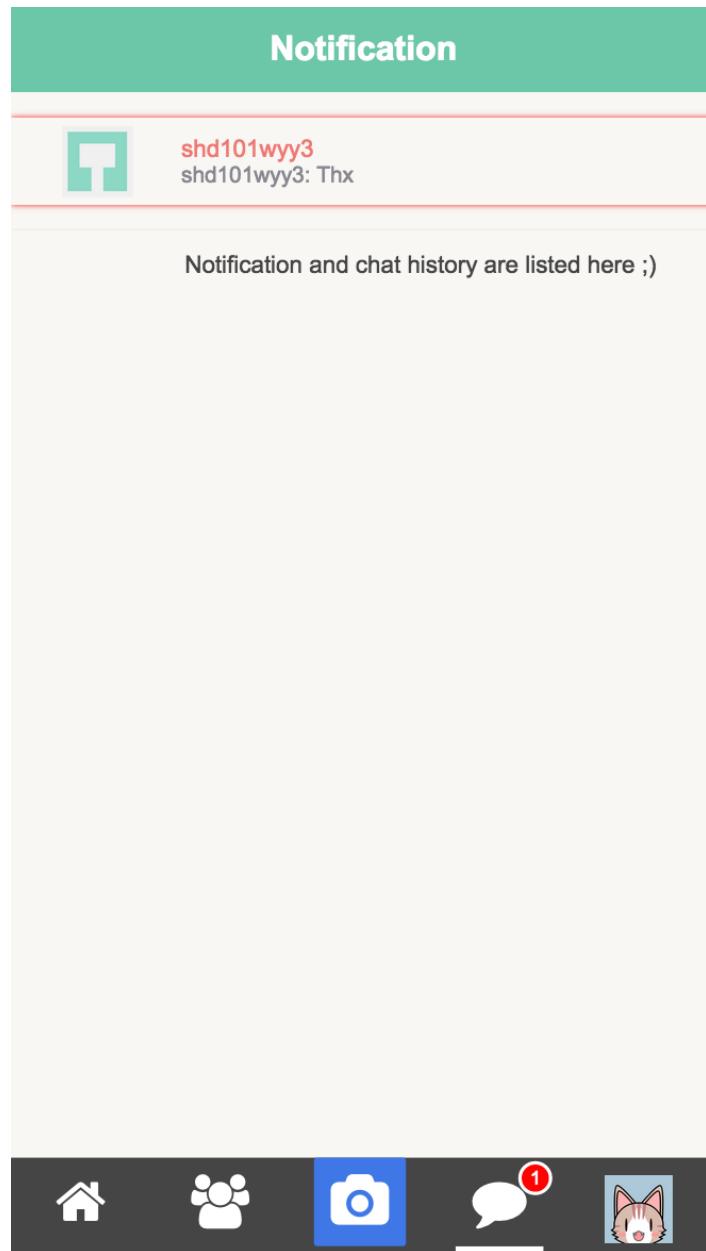

The newest message should be put on the top.

After the chat is created, it will be saved to notification page automatically.

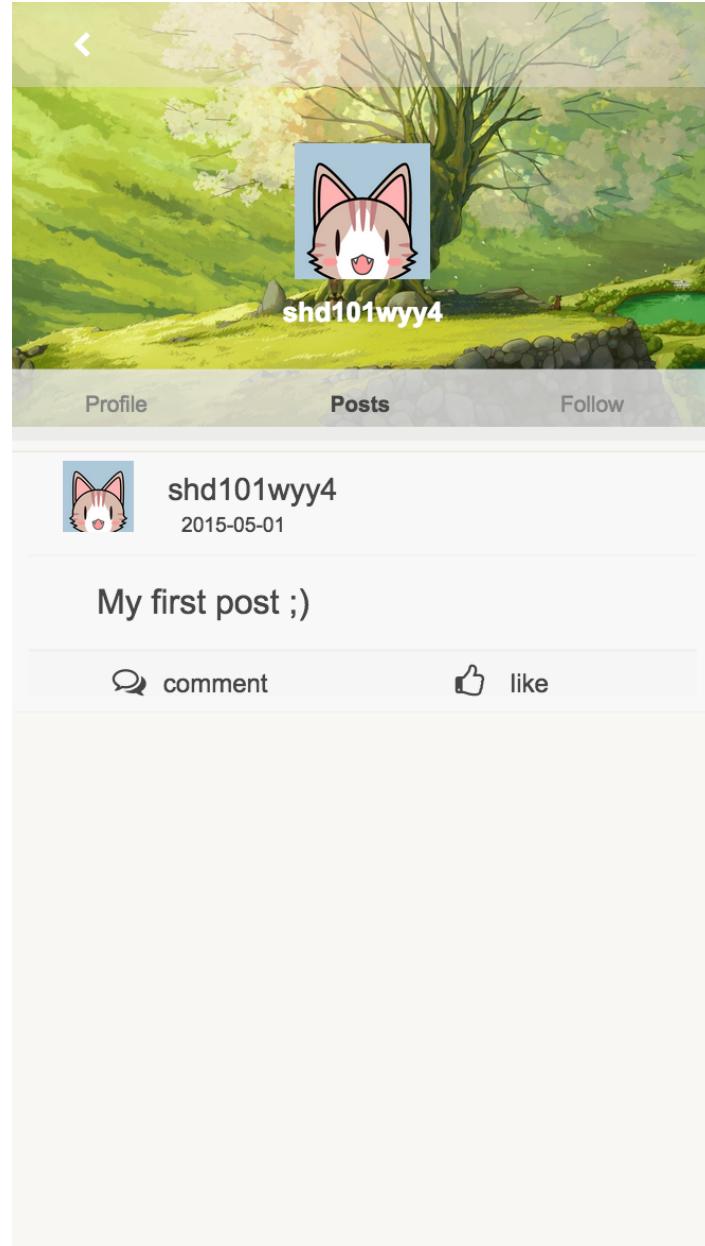

When the user is not in the chat page and received a message from another user, then the message will be shown in the notification page and marked in red color border. After user clicks the notification, he will enter the chat, and the red color border will disappear.

Let's go back to profile page again.

In the profile page, user can check all posts that he made before by clicking the "Posts" button in the middle.

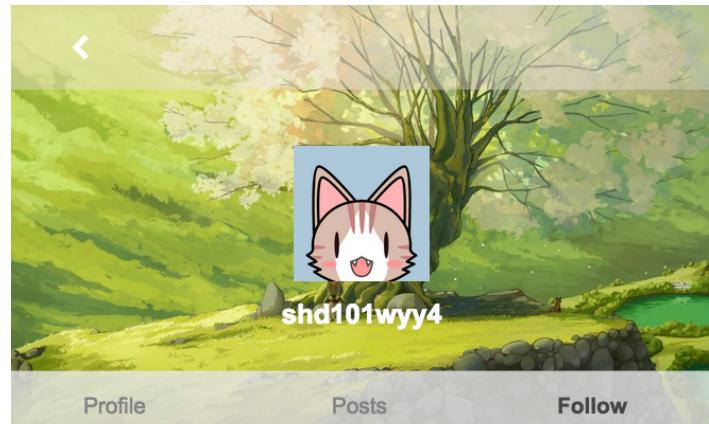

Also, the user can check who he is now following by clicking the "Follow" button on the right side.

User can unfollow who he is following by clicking

User can chat with the following user by clicking

User can also check following users' profile page by clicking the name card.

After clicking the "Yoo" button, the selection panel should pop up.

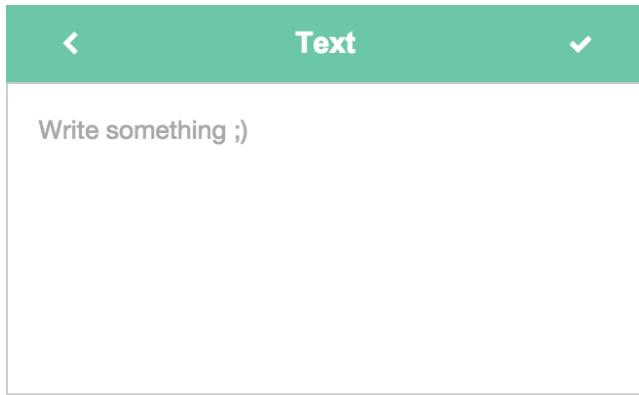

User can choose to post text, photo, or audio by clicking each corresponding button.

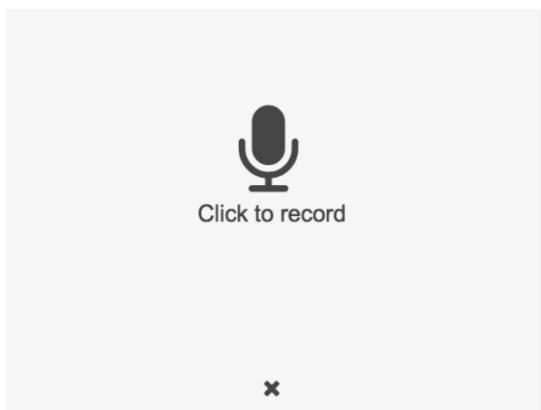

The screenshot shows a "Feeds" screen with two posts. The top post is from user "shd101wy" dated 2015-05-01. It features a vibrant illustration of a lush jungle scene with a path leading through dense green foliage and large leaves. Below the post are "comment" and "like" buttons. The bottom post is from user "shd101wy4" dated 2015-05-01. It contains the text "My first post ;)". Above this text is a selection panel with three options: "photo" (selected, indicated by a yellow bar), "text" (indicated by a red bar), and "audio" (indicated by a green bar). At the very bottom is a dark navigation bar with icons for home, users, camera, message, and profile.

If user clicks the "photo" button, the application will ask user to upload a picture.

If user clicks the "text" button, the page below will appear, and user is allowed to post less than 300 words.

If user clicks the "audio" button, the audio panel will show up, and user can record and upload audio by clicking the mic.

Thank you ;)
